The graph displays the daily death toll from COVID-19 in the United States. The y-axis represents the number of deaths, ranging from 0 to 10,000. The x-axis shows the timeline from March 2020 to March 2021. A major peak is observed in early April 2020, with daily deaths reaching nearly 10,000. Following this peak, the death toll generally decreased, with some fluctuations, and then experienced a second, smaller peak in early January 2021, before declining again towards the end of the period shown.

48233

The graph displays the daily death toll from COVID-19 in the United States. The x-axis represents time from March 2020 to March 2021, with markers for each month. The y-axis represents the number of deaths, ranging from 0 to 10,000. The data shows a sharp increase in deaths starting in March 2020, peaking at approximately 10,000 deaths in early April 2020. Following this peak, the death toll generally decreased, with some fluctuations, and then began to rise again in late 2020, reaching a second peak of about 8,000 deaths in March 2021 before declining again.
